Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present sequence is Arabidopsis thaliana NAC1 protein. The NAC1 gene belongs to the NAC family of genes which may play a role in patterning of the shoot and floral meristem. This gene was isolated from an A. thaliana cDNA library expressed in Schizosaccharomyces pombe cells. The NAC1 gene may be used for making a genetically altered plant which is larger than a wild type version of the plant by overexpressing NAC1. The modified plant produces larger leaves, larger roots and more lateral roots than the wild type version.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Protein identification; signal transductior pathway; metabolic pathway; hybridisation assay; genetic mapping; gene expression control; promoter; termination sequence.

NAME/KEY: BRCA1 protein
LOCATION: 1 to 1863
LOCATION: 1 to 1863
LDENTIFICATION METHOD: observation of mRNA and
LDENTIFICATION METHOD: antisense inhibition of BRCA1 gene
OTHER INFORMATION: regulatory effect on growth of human mammary cells.
OTHER INFORMATION:
AUTHORS: Miki, Y., et. al.
AUTHORS: Miki, Y., et. al.
TITLE: A strong candidate gene for the breast and
TITLE: ovarian cancer susceptibility gene BRCA1.
